Project's Guidelines

As a dev student I want to have a portfolio website that stores relevant information to my career so that I can showcase my coding experience to prospective employers.

As a dev student I want to be able to have a space for my latest posts and projects so that anyone visits my site can view my portfolio and links of interest.

As a dev student I want to be able to have a space on my website to write about me so that if any employer who visits my website can have an idea of my personality.

As a dev student I want to be able to have a space on my website to share my work experience, relevant skills and education information so that I can display my resume to prospective employers who visit my website.

As a dev student I want to be able to have a space on my website to share my contact information such as location, e-mail, phone number and social media links, so that it's possible to contact me if necessary.

+ Add another card

To Do

Display the section's name only when the mouse cursor passes over the icon. How ?!

+ Add another card

Doing

Create and write README.md

Answer the questions about internet development

Create the presentation ppt

+ Add another card

Done

Create HTML file

Create CSS file

Create GitHub repository

Design website

Create four different sections: home, profile, history and contact

Search for icons and fonts

Write the content for each section

Define background image

How to separate the content in different pages ? (Not all content in the same page) -- Bootstrap !!
